

# ToiKE Oike

The Official Newspaper of the University of Toronto Engineering Society, Est. 1906.

Vol. 89, No. e+π Friday, January 8, 1995. Cost: 1 Blue Chariot

## Toike Predictions For '95

- Elec Chariot will be stolen and destroyed
- The Montreal Canadians will not win the Stanley Cup (Neither will the Leafs)
- Michael Jackson won't consummate his marriage (but his monkey Bobo will)
- Dinosaurs will take over the SkyDome... then Canada Post
- Pope John Paul II will admit to inhaling, and nothing will happen
- Insider trading of Eng Sci stock club into Pocket Protector Inc. revealed
- The Roling Stones will bring out a new album called Voodoo Retirement Lounge
- U of T president Robert Pritchard will reluctantly admit that his dad used his political influence to get him through law school
- NASA will redesign the space station Alpha, and call it Alphukdup
- Roseanne Barr goes on the Oprah diet. After losing 13 stone, her show is cancelled as Americans can no longer relate
- Five CIVS will be maimed in concrete tobogganing
- Marriot food will be bad, really bad
- In 1995, a radical feminist will try to blow up the CN Tower, claiming that the structure is offensive to women
- In 1997, Toronto will become *anatomically correct* as a second SkyDome is erected (under the CN Tower) for the Raptors
- Eng Sci Flrosh will determine pi exactly, without using an HP
- U of T will STILL be short of money
- Eng Sci's will three-peat in the 1995 Chariot Race (I hear they'll steel a chariot if they have to!)
- Ry-High students will protest to become a Polytechnical Institute again because they're work is too hard since they've become a University
- SUDS will sell BEvERages on a Friday afternoon
- NetTrek will become an Olympic sport
- Counterfit MAGIC cards will flood the market and send the value of real MAGIC cards plummeting

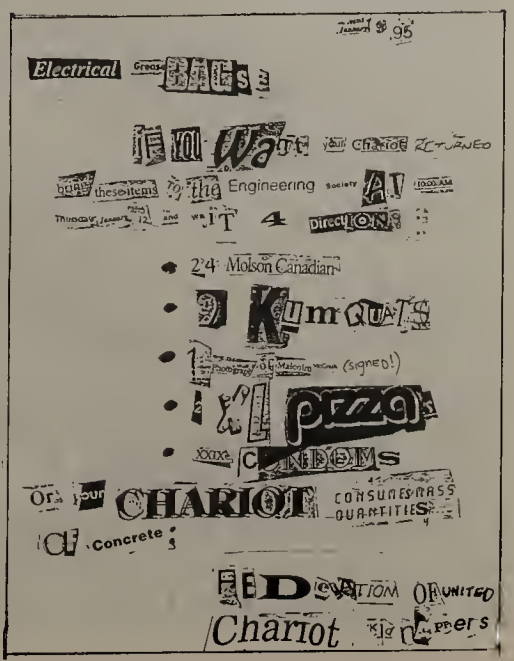

## Elec Chariot Stolen

This photograph and ransom note were discovered in the Toike mailbox on Wednesday, January 4th.

The Toike Investigative Team (TIT), after extensive research has been unable to determine the motives or goals of the previously unheard of Federation of United Chariot Kidnappers (F.U.C.K.??).

Says an anonymous 9T5 Elec, "I'm totally outraged at the nerve of those punks who think they can mess with elec. If they don't return the chariot immediately and undamaged I know they're they're gonna pay and pay big time"

Bring the gang over  
for your next party.

# EDITURD'S WORD

Dear Beloved Readers,

I am hurting for an Editorial. No no no... REALLY hurting! GODIVA'S week is coming up. Everyone better go... it's going to be a lot of fun. This font size is way too small to get the job done... but, alas, if I make it any larger, some people will come up to me and tell me that my layout was bad because everything wasn't the same fucking size!

Some of you might notice that there are a few pages missing from your Toike. Not to worry, since this Toike had to be out in the first week of school and I had some things to do over the holidays - oh, say, celebrate someone's birthday, celebrate the end of the old year, celebrate the beginning of the new year, (what about your thesis - James) Oh, I forgot about that. Anyway, what I was trying to say before I got side-tracked,

was that I had only a couple'a'daz to get this Toike done. And in the rush, we were robbed and someone took four flats.... why would they take four flats, you ask? ... The T.I.T is investigating this, and they think it might be the Varshitty trying to spice up their paper with our hard work. So there's only 8 pages in this Toike... the other 4 might be in the next Varsity.

Did you hear the news? Lois Lane, Clark Kent, and Ma Kent are going to be put under the witness protection program (says DC comics) because the 'bad guys' are starting to figure out the identity of the man of steel.

Editor'd'n Cheif

## Message from the Dean Happy 1995

I wish all the students of the Faculty of Applied Science and Engineering a very happy and productive 1995. And now is a good time to resolve to get to class on time (how about just 'get to class' - Ed), and.....!

On December 22 I personally delivered our Strategic Plan 1995-2000 "Strengthening Canada's Preeminent Engineering Faculty" to the Office of the Provost for formal consideration. Thanks to many students who participated directly and indirectly in the preparation of the Plan. The student perspective was invaluable in putting this submission together.

The Plan is really the initial step in the realization of major change within the Faculty. For example, it calls for a set of collaborative programs in environmental engineering. I expect to call upon students to become involved in various aspects of implementation.

I want to emphasize again that computer facilities are provided in support of the academic mission

of the Faculty. Some students, unfortunately, are abusing their access privileges by taking news feeds and achieving material which is clearly not consistent with the needs of their academic programs. Such activities is regarded as an offense under the Code of Student Conduct and will be dealt with accordingly.

I call to your attention to the following item which is being widely distributed throughout the Faculty office and the Engineering Computer Facility:

### Faculty Regulations for Computer Facilities

- 1 All computer equipment in this Faculty is to be used for academic purposes only!
- 2 Furthermore: The use of any computer equipment to display or distribute material that could reasonably be expected to degrade, offend, or promote hatred or violence against any per-

son or group is inconsistent with the purpose of the equipment, and is not permitted.

These regulations are designed to promote an atmosphere in which all students can pursue their academic programs, as well as discourage wastage of our computer resources. Violators are subject to having all their U of T computer accounts closed down, and/or other disciplinary action until the provisions of the University of Toronto Code of Student Conduct.

Now is the time to seriously consider entering the PEY program, if you haven't already done so. Second and Third Year students are encouraged to register and participate in interviews with employers. Many jobs are available for the period May 1, 1995 through to August 1996. Please contact Donna Onyschuck in the PEY Office, SF B740.

Each year we take great delight in the academic and related accomplishments of our students. I know that we won't be disappointed in 1995!

# TOIKE MAILROOM

Due to the cold weather we had at the beginning of December, the mailroom serfs were found frozen in their little shed. The fuse, which powers their portable heater, was taken out to replace the blown fuse for the refrigerator in Eng Com. In attempts to keep the

beer from getting warm, no one remembered the poor serfs out in the cold. Experts on heat transfer said "Yes, they probably froze slowly, with lots of pain. They would have been able to move to one of the Engineering buildings, accept that

someone had parked their car up against the door of their shack." They were first noticed missing when we needed money to pay for the pizza. Maybe when they're conscious again, we'll ask them why they didn't just climb out the window

that was frozen open behind them.

Attempts are being made to defrost them, and hopefully by the next issue of the Toike, they'll be breathing again... besides, no one else has been willing to answer all the mail that's been piling up.

## JOIKES!JOIKES!JOIKES!

This guy walks into a pet store and tells the person working that he's looking for a canary - bright yellow, that will sing to him all the time.

"Oh, sir, I'm sorry, but we've run out of canaries right now. What I can do is sell you a parakeet..."

"A parakeet!?" The man says, "What would I want a parakeet for?"

"Well, if you file down his beak he will sing just like a canary."

At first the man didn't believe that this was true, but after a few minutes of convincing, he ended up buying a parakeet. On his

way home, he stopped by the hardware store to pick up a file for his parakeet.

A service person approached him and asked: "May I help you?"

"Yes." The man responded, "I'm looking for a file to file the beak of my new parakeet with." He explained that he wanted to get a canary, but that they were all sold out.

"Yep, filing their beak does make the parakeet sing like a canary." The service person said, "But you have to be careful, because if you file it too much it will drown when it goes to drink water."

The man took this into consideration, purchased the file and went home with his new parakeet.

A month later, the man was back in the pet store again and the person working there remembered him buying a parakeet just a little while ago. How is you're parakeet doing? Does it sing like a canary?"

"Oh, no." The man replied, "It's dead."

"What happened, did you file his beak to much and it drowned?" The pet store worker asked.

"No, he was dead when I took him out of the vice!"

- Where do you find a turtle without any legs?

...Where ever you last left it!

- How many graduate students does it take to change a light bulb?

...Only one, but it may take up to five years to get done.

A woman calls her butler into her bedroom, "Charles," she says.

"Yes, madam?" Answers the butler.

"Charles, take off my dress."

"Yes, madam." he says as he remover the dress.

"Charles, take off my bra."

"Yes, madam." Ha says as he removes her bra.

"Now, Charles, take off my shoes and stockings."

"Yes, madam." He says as he removes her shoes and stockings.

"Now," says the woman, "Take off my panties. And I'm warning you, Charles: you're going to lose you job if I ever catch you wearing my cloths again!"

- How many mice does it take to screw in a light bulb?

...Only two, but the hard part is getting them into the light bulb.

- How many feminists does it take to change a light bulb?

...One, And there's nothing funny about it.

## Varshitty Discovery Revolutionizes Materials World!

Justin Klodned CIV 9T6  
(Sorry if I misspelled your name - Ed)

In an amazing find, the Varshitty recently reported of cement medians being constructed as part of the Hart House Crossing. This discovery has left the material researchers mystified, as they postulated that cement was only one of several ingredients in concrete. That structures are being built of cement alone, is truly a remarkable find, attesting to the journalistic prowess of the Varshitty.

Right is the Varshitty article claiming their magnificent finding!

(Samantha Rajasingham/VIS)

## New place to stand at Queen's Park

After years of protests and sit-ins on Queen's Park circle, the Hart House Crossing is near completion.

The construction, which cost U of T \$54,000, was supposed to be in place by Sept. 1. However, the city of Toronto did not contract the job out in time.

The raised cement median was the brain

child of St. Michael's college student and Students' Administrative Council representative Mike Rusek.

In 1990 a traffic consultant's report said the best solution to the hazardous crossing was to build a \$500,000 underpass. But Metro refused. Thus, the cement.

STAFF

# More Joikes!

A little boy and a little girl are playing one afternoon. The little boy pulls down his shorts and says, "I have one of these and you don't." The little girl started crying and crying and runs home to her mother.

The next day, the little boy and little girl are playing again. Once again, the little boy pulls down his shorts, points to his private parts and says, "I have one of these and you don't." But the little girl just keeps on playing. "How come," says the little boy, "You're not crying today?"

"My mother told me," replies the little girl, pulling up her dress, "That with one of these I can get as many of those as I want."

A man down on his luck goes home to his wife and tells her, "Look, dear, we're low on money now, and we're going to have to cut down on some luxuries." He adds scornfully, "If you learned how to cook, we could fire the chef."

"In that case," replied the woman, "If you could learn to make love, we could fire the chauffeur."

.....  
- What do a moped and extremely fat people have in common?

...They're both fun to ride until your friends see you with them.

- There's this Texan-Mexican dude, and he gets caught by a band of Native Indians. They tell that they're going to execute him but they'll give him one request

before he dies.

"Ok," The man says, "I'd like to talk to my horse for a moment."

The Indians think that this is a strange request before you die, but they grant it to him anyhow.

He goes over to his horse, talks with it for a moment, and then the horse leaves - running as fast as it can.

A few minutes later, as the Indians are about to kill him, the horse returns to his owner. The owner looks up to his horse and notices the sexy, barmaid sitting on top. "You stupid horse!" He screams, "I said get me a POSSE!"

This filler is brought to you by the X-VP FINANCE

## Dean of Engineering Planning on Running in Chariot Race Next Week

Earlier this week, the Dean of Engineering made a phone call to Eng Soc to enquire about the Chariot Race this Thursday. Sources say he was thinking of entering a Chariot and team, comprised of all the Faculty staff, into the race in hopes to "show those kids how a real race is run".

Julie, who spoke with him over the phone, had this to say: "Oh, ya. It looks like he's really thinking about it (entering the race). I checked the race rules and I told him that the eligibility requirements said that only the Engineering disciplines, the Flrosh and the SAC team were allowed to enter into the race. He seemed sure that if he talked to the Blue and

Gold chair, offering a special gift (BEvERages) and a challenge of the staff against the students, that they would be able to enter their own chariot. I hope he doesn't hurt himself - all that physical exertion and all."

The T.I.T was unable to confirm any of this but brought up the question:

"If they (the Dean and his team) are entering a team this late, there's no way they can put together a suitable chariot in time. Where else are they going to be able to get a chariot to race with? Hhhmmm."

Local bookies have already been giving an optimistic 1:10,000 chance of the Faculty winning the race.

## Yet Another Squirrel Story

(From the CAMPUS CARE NEWS)

The property Managers thought they had heard the last of the squirrel complaints (see story in Summer edition), until they got another "nutty" call recently.

Caller: I have a squirrel in my office. Send someone over right away and remove it.

Manager: I'll have caretaking notified. They'll pick up the dead squirrel and dispose of it as soon as possible.

Caller: The squirrel isn't dead. It's running all over my office and if it bites me, I'll sue the University.

Manager: This could be a problem. I'll contact the pest control. Tell me, how did the squirrel get into your office?

Caller: I offered it a piece of my sandwich at the window. It came in and I want it removed now!

Manager: I suggest that if you want it removed now you go outside your window and offer it the rest of your sandwich.

Caller: That's a ridiculous suggestion. My office is on the third floor.

## Next Toike Make-up: Thursday, January 19th at 5pm In Eng Soc

**We need artists, writers, people gifted with the ability to brain storm!**

**No experience required... only a pen, paper and an appetite for PIZZA and BEVERages.**

**And remember, there's ALMOST nothing better than seeing your name in print! - ALMOST!**

# Is there a Santa Claus? 4 Score and 7 Snow Falls Ago

1) No known species of reindeer can fly. BUT there are 300,000 species of living organisms yet to be classified, and while most of these are insects and germs, this does not COMPLETELY rule out flying reindeer which only Santa has ever seen.

2) There are 2 billion children (persons under 18) in the world. BUT since Santa doesn't (appear to) handle the Muslim, Hindu, Jewish and Buddhist children, that reduces the workload to 15% of the total - 378 million according to Population Reference Bureau. At an average (census) rate of 3.5 children per household, that's 91.8 million homes. One presumes there's at least one good child in each.

3) Santa has 31 hours of Christmas to work with, thanks to the different time zones (which seems logical). This works out to 822.6 visits per seconds. This is to say that for each Christian household with good children, Santa has 1/1000th of a second to park, hop out of the sleigh, jump down the chimney, fill the stockings, distribute the remaining presents under the tree, eat whatever snacks have been left, get back up the chimney, get back into the sleigh and move to the next house. Assuming that each of these 91.8 million stops are evenly distributed around the earth (which, of course, we know to be false but for the purposes of our calculations we will accept), we are now talking about 7.8 miles per household, a total trip of 75-1/2 million miles, not counting stops to do what most of us do at least once every 31 hours, plus feeding and etc.

This means that Santa's sleigh is moving at 650 miles per second, 3,000 times the speed of sound. For purposes of comparison, the fastest man made vehicle on earth, the Ulysses space probe, moves at a pokey 27.4 miles per second - a conventional reindeer can run, tops, 15 miles per hour.

4) The payload on the sleigh adds another interesting element. Assuming that each child gets nothing more than a medium-sized lego set (2 pounds), the sleigh is carrying 321,300 tons, not counting Santa, who is invariably described as over weight. On land, conventional reindeer can pull no more than 300 pounds. Even granting that "flying reindeer" (see point #1) could pull TEN TIMES the normal amount, we cannot do the job with eight, or even nine. We

need 214,200 reindeer. This increases the payload - not even counting the weight of the sleigh - to 353,430 tons. Again, for comparison, this is four times the weight of Queen Elizabeth.

5) 353,000 tons travelling at 650 miles per second creates enormous air resistance - this will heat the reindeer up in the same fashion as spacecraft re-entering the earth's atmosphere. The lead pair will absorb 14.3 QUINTILLION joules of energy. Per second. Each. In short, they will burst into flames almost instantaneously, exposing the reindeer behind them, and create deafening sonic booms in their wake. The entire reindeer team will be vaporised within 4.26 thousandths of a second. Santa, meanwhile, will be subject to centrifugal forces 17,500.06 times greater than gravity. A 250-pound Santa (which seems ludicrously slim) would be pinned to the back of his sleigh by 4,315,015 pounds of force.

In conclusion - if Santa ever DID deliver presents on Christmas Eve, he's dead now.

## Dec 4

5:00 It started to snow. The first of the season and the wife and I took our hot buttered rum and sat by the window, watching the soft flakes drift down, clinging to the trees and covering the ground. It was beautiful!

## Dec 9

We woke to a beautiful blanket of crystal white snow covering the landscape. What a fantastic sight. Every tree and shrub covered with a beautiful white mantle. I shovelled snow for the first time in years. And I loved it. I did both our driveway and our sidewalk. Later, the snowplow came along and covered up our driveway with compacted snow from the street. He smiled and waved back. I shovelled again.

## Dec 13

The sun has melted most of our lovely snow. Oh well, I'm sure we'll get a little more before this lovely winter is through.

## Dec 14

It snowed 8 inches last night and the temperature dropped to 0. Shovelled the sidewalk and drive-

way again. Shortly, the snow-plow came by and did his trick again.

## Dec 15

Sold our car and bought a 4X4 Blazer, so we could get around in the snow.

## Dec 18

Fell on my ass on the ice in the driveway. \$123.00 to the chiropractor, but nothing was broken, thank God. The damn sky is getting darker again.

## Dec 19

Still cold (-5 this morning), icy roads, making for very tough driving. Slid into a guard rail with my wife's car. Probably \$2,000 damage or so. I'm cut off.

## Dec 20

Had another fourteen inches of the white shit last night. More shovelling in store for me today. That goddamn snowplow cam by twice.

## Dec 22

We are assured a white Christmas; because another 7 inches of the white shit fell today and with this freezing weather, it wont melt until August. I got all dressed up to go out and shovel that shit again (boots, jump suit, jacket, scarf, earmuffs, gloves, etc.), then I got the urge to pee!

## Dec 24

If I ever catch the son-of-a-bitch that drives the snowplow, I'll drag him through the snow by his balls. I think he hides around the corner and waits for me to finish shovelling, and then he comes down the street 100 miles and hour and throws that white shit everywhere.

## Dec 25

Merry Christmas. They predict 12 more inches of the fucking white shit tonight. Does anyone know how many goddamn shovelfuls of snow 12 inches is? To hell with Santa, he doesn't have to shovel that white shit. The snowplow came by today asking for a donation. I hit him with my ice axe.

## Dec 28

We got 11 more inches. I must be going snow blind or have some sever case of depression, because the wife is beginning to look good to me.

## Dec 29

The toilet froze and the roof is starting to cave in. If you go outside, don't eat the brown snow

## Dec 30

I torched the goddamn house and I'm moving back to California.
